

# Terroxy Resin Systems

Taking pride in creating healthier indoor environments

In today's construction environment there is a heightened awareness to indoor air quality. Various flooring products have the potential to emit many different types of toxins into indoor air, putting the health of the people that occupy the building at risk. For this reason, Terrazzo and Marble Supply Co. have attained GREENGUARD GOLD Certification through UL Environment for our Terroxy Epoxy Terrazzo Flooring System.

UL Environment, a division of UL (Underwriters Laboratories), works to advance global sustainability, environmental health, and safety by supporting the growth and development of environmentally preferable products, services, and organizations. UL's mission of working for a safer world since 1894 has led them to be the most influential presence in home safety. The GREENGUARD Certification mark can be displayed on the product, packaging, and in promotional materials to communicate that a manufacturer's product(s) has achieved and maintains certification. For more information, visit [www.ul.com/environment](http://www.ul.com/environment).

With Terroxy Resin Systems you can breathe easier knowing that our products have been directly tested to ensure they will not pose health risks to building occupants. As a "Green" conscience company, Terrazzo and Marble Supply Co. is proud to prominently display the GREENGUARD GOLD certification mark and looks forward to supplying your next epoxy terrazzo project.

GREENGUARD Gold Certification (formerly known as GREENGUARD Children & Schools Certification) offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy and Environmental Design (LEED) Building Rating System. This standard is designed to define low-emitting materials suitable for environments where people, particularly children and sensitive adults, spend extended periods of time, in particular schools and healthcare facilities.

Taking pride in creating healthier indoor environments

The GREENGUARD Gold Certification requirements comply with the State of California's Department of Public Health Services Standard Practice for Specification Section 01350 (California Section 01350) for testing chemical emissions from building products used in schools and other environments. As such, GREENGUARD Gold Certified products can be used to earn valuable credits in the CHPS Best Practices Manual for K-12 schools, the US Green Building Council's LEED® Green Building Rating Systems, the Green Guide for Healthcare, the NAHB Green Building Guidelines, Green Globes, Regreen and many other building codes, standards and specifications.
