

INTRODUCING  
**TERROXY® RED LIST FREE**

**Declare.**

In an effort to keep up with evolving construction standards and continue our commitment towards environmental responsibility we are proud to introduce an approved Declare Label Red List Free version of our terrazzo system. Terroxy RLF meets the International Living Future Institute's requirements for being "Red List Free". T&M recognizes the need for transparency to combat "Greenwashing." Therefore, Terroxy RLF has gone through the rigorous process to become a 3rd party verified Declare Label. By utilizing alternative upstream raw materials and suppliers, the RLF system is more sustainable, has a reduced carbon footprint, and is nonylphenol & red list free. In addition, Terroxy RLF products contain an average of 20% bio-based content, with some containing almost 40% bio-based materials. Incorporating these bio-based raw materials has reduced the Global Warming Potential (GWP) of the Terroxy RLF raw materials by up to 40%.

A key element in our formulation of the new product was consideration of our Contractor partners. The formula we have developed mimics that of our current Terroxy product, so the installer and end user should not see much or any changes in their installation methods nor the finished product!

We are extremely excited for this product launch and addition to our Terroxy family of products. Since it continues under the Terroxy name, we need to differentiate it as well. Hence, the new "RLF" designation. New, yes. Formulated and being produced under the same quality standards as our Terroxy product since 2001, rest assured that you can put your total confidence in this product. If being Red List Free is not an area of interest, we continue to produce the original line of Terroxy products as well.

**For more information on the new Terroxy RLF product offering, please reach out to your sales representative, your customer service partner or visit our website [tmsupply.com](http://tmsupply.com).**
